

Project

- Work individually.
- Submit a code and a short explanation along the code. The names of the files should be YOURNAME.py (or YOURNAME.ipynb) and YOURNAME.docx (e.g. OrsanOzener.py, OrsanOzener.docx)
- Any type of plagiarism will not be tolerated and will lead to disciplinary actions.
- **Due Date: 12th of June 2026, 13:00. Please submit your report through LMS. Only ONE submission per person.**

1 Introduction

In this assignment, your task is to tackle a regression problem focused on predicting real estate property prices. It's worth noting that the dataset encompasses various property types, and your approach to learning across these categories will require your discretion.

The training dataset is stored in the file "zingat2020_1.csv", while the test dataset can be found in "zingat2020_2.csv".

Evaluation metrics for performance will be Mean Squared Error (MSE) and Mean Absolute Percentage Error (MAPE). Your objective is to construct a comprehensive ML pipeline, encompassing data cleaning, model selection, and hyperparameter tuning. Additionally, you are expected to develop a robust Neural Network Model, notwithstanding the possibility of employing potentially more effective methods. It's essential to adhere to the restriction of solely using models discussed in class.
